

Thodsaporn Chay-intr

Hands-On AI/ML Engineer · Chief AI Officer — LLMs, Speech, and Multimodal AI

Bangkok, Thailand · +66-84-568-1166 · t.chayintr@gmail.com · linkedin.com/in/tchayintr · github.com/tchayintr · boated.zip

AI/ML leader with 9+ years in NLP and production AI, shipping domain-tuned Thai LLMs (OpenThaiGPT, ChindaLLM, ChindaMT, OpenThai Legal) with speech and multimodal systems behind 85M+ API calls. Chief AI Officer at iApp Technology, working directly with enterprise, banking, and government clients — including builds with NVIDIA and NEC — from scoping through delivery. Doctorate from Institute of Science Tokyo, with publications at AACL-IJCNLP, EACL, RANLP, and the Journal of Natural Language Processing.

Work Experience

iApp Technology Co., Ltd., Bangkok, Thailand

Jan 2024 – Present

Creator of OpenThaiGPT; named a Top 5 Thai AI startup in 2026, serving 100+ enterprise, banking, and government clients.

Chief AI Officer · Jun 2025 – Present

Previously Head of AI (2024–25)

- Led the AI and R&D departments, 10+ members across AI, software engineering, and design.
- Delivered 10+ client AI projects, from pre-sales scoping through maintenance.
- Grew the AI product lines (LLMs, speech, vision) 4x since 2024, to 85M+ calls, using the latest methods.
- Set AI strategy with the CEO and scaled self-hosted GPU serving to hundreds of thousands of daily requests.
- Raised the company's enterprise profile through one.iapp.co.th, open.iapp.co.th, and national AI talks.

Artificial Intelligence Association of Thailand, Thailand

Jan 2018 – Aug 2023

ML Researcher | Lecturer

- Advised government and public sectors on AI transformation strategies, contributing to 10+ projects and publications.
- Delivered ML/NLP courses on algorithms, techniques, and tools (e.g., SVM, parsing, scikit-learn).

Institute of Science Tokyo (formerly Tokyo Institute of Technology), Japan

Sep 2019 – Mar 2020

Research Assistant

- Collaborated on an NLU module for real-world Japanese dialogue, focusing on linguistic attribute extraction.
- Developed a Seq2Seq model with cross-attention in PyTorch for NLG, improving naturalness in Japanese text generation.

iApp Technology Co., Ltd., Thailand

Mar 2017 – Feb 2018

AI/ML Engineer | Researcher

- Led the first Thai Treebank, still used in Thailand's national AI competitions.
- Deployed a GCP annotation tool: +3% annotation quality, half the annotation time.

Education

Institute of Science Tokyo (formerly Tokyo Institute of Technology), Tokyo, Japan

Apr 2019 – Sep 2023

Doctor of Engineering — Information and Communications Engineering (*NSK Scholarship Foundation*)

Sirindhorn International Institute of Technology, Pathum Thani, Thailand

Jul 2015 – Aug 2018

Master of Engineering — Information, Communication and Technology for Embedded Systems (*TAIST Tokyo Tech Scholarship*)

Thammasat University, Pathum Thani, Thailand

Jun 2011 – Aug 2015

Bachelor of Science — Computer Science (*Chairman of the Student Representative Council*)

Key Skills

Programming	Python, C/C++, Rust, Shell
ML Frameworks	PyTorch, PyTorch Lightning, Hugging Face, TensorFlow, PyG, scikit-learn, OpenCV, spaCy, NLTK
Fine-tuning	SFT, DPO, KTO, GRPO, LoRA/PEFT, LLaMA-Factory, ms-swift, TRL, DeepSpeed/FSDP, NVIDIA NeMo
Models tuned	Llama, Qwen, Gemma, Mistral, Typhoon, Nemotron, LLaVA, Whisper, BERT
Domains	Legal, Medical, Banking and finance, Government, Broadcast and telecom, Elderly care
Serving	vLLM, TensorRT-LLM, Triton, Quantization, LoRA serving
Speech	ASR, TTS, Voice cloning, Speech-to-speech, Real-time translation
Infrastructure	Linux, Docker, Kubernetes/k3s, Jenkins, Kong, MinIO, Elasticsearch, Kibana, Hadoop/Spark, SQL/NoSQL, GCP, AWS, Git, FastAPI
AI tooling	Claude Code, Codex, MCP
Languages	Thai (Native), English (Advanced), Japanese (Intermediate)

Products and Projects

OpenThai 2.0 Legal: Open-weight Thai legal LLM, built with NVIDIA, BDI, and AIEAT

Jul 2026 – Aug 2026

- Built OpenThai 2.0 Legal with NVIDIA, BDI, and AIEAT on Nemotron-3-Nano-30B; released open-weight.
- Selected for TH-AI Passport, Thailand's national AI programme targeting 5M citizens; live on AiPASS.

OpenThai 2.0 27B: Open-weight general-purpose Thai LLM on Qwen3.8-27B

Aug 2026 – Sep 2026

- Contributed tuning, design, and QA; released open-weight under Apache-2.0.
- Beats its Qwen3.8-27B base on 14 of 16 benchmarks, same harness and serving setup.
- Thai document reading 0.126 vs 0.370 CER, a 66% error cut; Thai code-switching 0.985 vs 0.895.

ChindaMT: Rule-following Thai–English translation, open models and service

Mar 2026 – Present

- Built rule-following Thai–English MT at 4B, 2B, and 0.8B, up to a 68.4% win rate vs the strongest baseline.
- Hosted as a translation API service, translating a sentence in about 0.4s and five pages in 1.7s.

CIBbot: Legal advice and incident reporting, Royal Thai Police (CIB)	Mar 2026 – Jun 2026
• Led the public assistant that advises on law and cybercrime, then prepares and routes each citizen's report. • Built Tri-RAG (hybrid search + PageIndex + knowledge graph): 96.6% retrieval, 91.7% QA, 208-item legal eval. • Ran on-premise and air-gapped over 670 documents from 7 bureaus, with a 3.2s p95 first token.	
OpenThaiGPT 1.6 & R1: Thai-centric open-source reasoning LLMs	Mar 2025
• Built OTG 1.6 by task-arithmetic merging; beat same-base Typhoon2-72B on OpenThaiEval, 78.7 vs 77.2. • Built OTG-R1 on DeepSeek-R1-Distill-32B with LIMO training; beat DeepSeek-R1-70B on AIME24-TH, 56.7 vs 33.3.	
Chinda 3: Enterprise knowledge platform — Chinda to ChindaX to Chinda 3	Jan 2024 – Present
• Led three generations of iApp's enterprise AI platform; ChindaX and Chinda 3 serve 2,000+ users. • Chinda 3 retrieves at 98.7% vs ~70% for chunk-based RAG, using adaptive hierarchical indexing from PageIndex.	
Conversational AI for Banking: 70B Thai financial assistant for a banking group	2024
• Built a 70B Thai financial assistant for a major banking group — benchmarked above GPT-3.5, Gemini Pro, and Claude 3 Haiku on Thai exams — and cut answer latency 7.6s to 3.1s on TensorRT-LLM/Triton.	
ASR Pro: Context-aware Thai ASR	Aug 2024
• Developed an approach enhancing ASR contextual awareness by integrating LLMs with prompt tuning into a fine-tuned ASR model. • Cut WER 3.12 points below Google STT on Thai Common Voice 17, running 1.3× faster.	
NBTC Broadcast Compliance Screening: Thai TV ASR with violation classification	Aug 2024
• Built content-compliance screening for NBTC, Thailand's broadcast and telecom regulator. • Fine-tuned Whisper for Thai TV transcription (CER < 0.05), then BERT to grade programmes safe, borderline, or violating at 95%+ F1.	
Internal AI Serving Platform: Hybrid k3s across cloud and colo GPU datacenters	Jul 2026 – Aug 2026
• Co-designed a two-datacenter k3s cluster, 26 GPUs on 10 servers, running every AI service. • Cut AI cloud spend 46% alongside the migration.	
Dual-Stage Face Anti-Spoofing: Active and passive liveness detection	Oct 2024
• Led development of a face anti-spoofing model with active liveness detection and passive spoof prevention. • Achieved iBeta Level 1 Presentation Attack Detection certification with 0% APCER and BPCER below 3%.	
Passive Liveness and Deepfake Detection: For Bangkok Bank, with NEC	Oct 2024 – Present
• Developed passive liveness detection with NEC for Bangkok Bank, screening face spoofing and deepfakes.	
ASRx: Real-time speech-to-text with instant translation	Jun 2025
• Led a real-time EN/TH/ZH speech-to-text and translation system, deployed live at large conferences.	
LLM Chatbot for Elderly Care: RAG-based companion and consultation assistant	Oct 2024
• Aligned an open-source LLM with SFT/DPO/KTO into a RAG companion for elderly users, with LLM agents handling data synthesis and auto-evaluation.	

Additional work

Open models	ThaiLLM (advising BDI on national LLM serving) · one.iapp and open.iapp (commercial APIs + open weights) · ETDA national OCR standard (co-author)
LLM & speech	ChindaLLM (open-source Thai reasoning LLM) · SpeechFlow (Thai–English transcription, 10K+ users) · Thai–English TTS (phoneme-level fine-tuning) · ChindaTTS (voice cloning, sub-second streaming) · ChindaGo (on-device iOS assistant, any open model)
Vision	Multimodal sentiment analysis (CLIP + BERT)
Research	Thai researcher knowledge graph · Simple2In1 (caption fusion for Thai) · First Thai Treebank (still used in national competitions)
